

IN THE CLAIMS

Please amend the claims as follows:

Claims 1-13 (Canceled).

Claim 14 (Currently Amended): An information storage medium configured to have data recorded thereon and data reproduced therefrom by an information recording/reproducing apparatus, said data including control information and video object data, the information storage medium comprising:

a data area configured to store:

a plurality of error correction code blocks including the video object data,

said video object data being configured to ~~be recorded in~~ have at least one of the video object units,

wherein a predetermined number of sectors form each error correction code block, and each of said sectors has a predetermined size; and

a control information recording area configured to store said control information, the control information being configured to manage the video object data and including an AV file information table having a first area configured to store object stream information, and a second area configured to store AV file information configured to ~~manage~~ describe information on the video object data, the AV file information including a plurality of object information, and a plurality of object information search pointers associated with the plurality of object information, wherein:

an error correction code block address ~~corresponds~~ relates to the predetermined number of said sectors, said video object data being allocated with an ~~internal~~ integral multiple of said predetermined number of said sectors,

each said object information includes time map information including time map general information, one or more time entries, and one or more object unit entries, and ~~said~~ time map general information in said object information includes information indicating a number of the time entries,

wherein the ~~recording/reproducing apparatus employs the control information to manage the video object data~~ control information is provided to control recording, playing back, or editing the video object by the information recording/reproducing apparatus, the video object data is accessed according to the control information.

Claim 15 (Currently Amended): An information recording method for recording information on an information storage medium including:

a data area configured to store:

a plurality of error correction code blocks including video object data,

said video object data being configured to ~~be recorded in~~ have at least one of the video object units,

wherein a predetermined number of sectors form each error correction code block, and each of said sectors has a predetermined size, and

a control information recording area configured to store control information for managing the video object data, the control information including an AV file information table having a first area configured to store object stream information, and a second area configured to store AV file information configured to ~~manage~~ describe information on the video object data, the AV file information including a plurality of object information, and a plurality of object information search pointers associated with the plurality of object information, wherein:

an error correction code block address ~~corresponds~~ relates to the predetermined number of said sectors, said video object data being allocated with an integral multiple of said predetermined number of sectors,

each said object information includes time map information including time map general information, one or more time entries, and one or more object unit entries, and

~~said~~ time map general information in said object information includes information indicating a number of the time entries,

the information recording method comprising:

recording the object into the data area; and

recording the control information, including the plurality of object information, into the control information recording area.

Claim 16 (Currently Amended): An information reproducing method for reproducing information recorded on an information storage medium that includes,

a data area including:

a plurality of error correction code blocks including video object data,

said video object data being configured to ~~be recorded in~~ have at least one of ~~the~~ video object units,

wherein a predetermined number of sectors form each error correction code block, and each of said sectors has a predetermined size, and

a control information recording area including control information for managing the video object data, the control information including an AV file information table having a first area including object stream information, and a second area including AV file information configured to ~~manage~~ describe information on the video object data, the AV file

information including a plurality of object information, and a plurality of object information search pointers associated with the plurality of object information, wherein:

an error correction code block address ~~corresponds~~ relates to the predetermined number of said sectors, said video object data being allocated with an integral multiple of said predetermined number of said sectors,

each said object information includes time map information including time map general information, one or more time entries, and one or more object unit entries, and

~~said~~ time map general information in said object information includes information indicating a number of the time entries,

the information reproducing method comprising:

reproducing the video object data from the data area; and

reproducing the control information, including the plurality of object information, from the control information recording area.

Claim 17 (Currently Amended): An information reproducing apparatus for reproducing information recorded on an information storage medium that includes

a data area including:

a plurality of error correction code blocks including video object data,

said video object data being configured to ~~be recorded in~~ have at least one of the object units,

wherein a predetermined number of sectors form each error correction code block, and each of said sectors has a predetermined size, and

a control information recording area including control information for managing the video object data, the control information including an AV file information table having a first area including object stream information, and a second area including AV file

information configured to ~~manage~~ describe information on the video object data, the AV file information including a plurality of object information, and a plurality of object information search pointers associated with the plurality of object information, wherein:

an error correction code block address ~~corresponds~~ relates to the predetermined number of said sectors, said video object data being allocated with an integral multiple of said predetermined number of said sectors,

each said object information includes time map information including time map general information, one or more time entries, and one or more object unit entries, and

~~said~~ time map general information in said object information includes information indicating a number of the time entries,

the information reproducing apparatus comprising:

a first reproducer configured to reproduce video object data from the data area; and

a second reproducer configured to reproduce the control information, including the plurality of object information, from the control information recording area.

Claim 18 (Currently Amended): An information recording apparatus for recording information on an information storage medium including:

a data area configured to store:

a plurality of error correction code blocks including video object data,

said video object data being configured to ~~be recorded in~~ have at least one of the video object units,

wherein a predetermined number of sectors form each error correction code block, and each of said sectors has a predetermined size, and

a control information recording area configured to store control information for managing the video object data, the control information including an AV file information

table having a first area configured to store object stream information, and a second area configured to store AV file information configured to ~~manage~~ describe information on the video object data, the AV file information including a plurality of object information, and a plurality of object information search pointers associated with the plurality of object information, wherein:

an error correction code block address ~~corresponds~~ relates to the predetermined number of said sectors, said video object data being allocated with an integral multiple of said predetermined number of sectors,

each said object information includes time map information including time map general information, one or more time entries, and one or more object unit entries, and

said time map general information in said object information includes information indicating a number of the time entries,

the information recording apparatus comprising:

a recording unit configured to record the object into the data area; and

the recording unit further configured record the control information, including the plurality of object information, into the control information recording area.
